

ME 2110

CREATIVE DECISIONS AND DESIGN

Video Report Specifications

As part of ME 2110 your team is required to give a number of presentations on the major competition. Rather than giving live oral presentations for every one of the assignments, three of your presentations will be videos that will be reviewed and graded by the class, as well as the instructor and TA. The videos must adhere to the ME 2110 presentation requirements in terms of content and style. Here are the specifications and instructions for generating and submitting the video:

1. All videos are to be posted on YouTube, and uploaded at the “Unlisted” privacy level. Once uploaded, you will provide the link to the video via e-mail to the studio instructor and the TA by the start of the studio session in which the video is due. **No late videos will be accepted.** You will also bring the link with you to your studio section so that you may play it for the entire studio. As you are uploading a video, it is highly recommended that you do not wait until the last minute to upload the video, as it will take some time for the video to upload. Also, you are responsible to verify that the link that you provide is a fully functioning link. Therefore, it is highly recommended that you validate the link (watch the entire video) before submitting the link.
2. The official length of the video will be the one shown in YouTube, so be sure to verify that your video does not exceed the length specifications. Please note that uploading to YouTube often adds 1 or 2 seconds to the video length. So do not make your video length exactly to specifications. Make sure to provide yourself with 5 seconds of cushion, or so. *Videos having an official length of greater than the specified limit will not be viewed.*
3. All videos will be watched during the studio section and graded according to (1) content, (2) adherence to ME 2110 guidelines, (3) artistic innovation, and (4) overall general rating. All students will participate in the grading of the videos. Grades for the presentation will be generated based on the ratings of the class, with different weightings for the instructor’s and TA’s grades. As there are 5 groups, all grading categories will require a grade of 1-5, with no duplicate grades being allowed in each category. The final grades will be a composite of the 4 categories. The highest rated video will be identified for the class as an exemplar of a successful presentation.
4. All videos must provide team member names as well as team number and other identifying information such that they can easily be scored.
